

REPLACEMENT SHEET

ABSTRACT OF THE INVENTION

A disk-like pouch for containing a compact disk (CD) is disclosed, having a tab for containing indicia referring to the contents of the associated compact disk contained in the pouch. The indicia tab extends from the disk-like pouch beyond the periphery of the compact disk when contained in the pouch.

A system for the storage and retrieval of compact disks is also disclosed, comprising a plurality of the same disk-like pouch, nested in a housing resting on a horizontal surface adapted so that each disk-like pouch can rotate about a common axis of the housing.
